

## Amibroker DTR Lines - Step by Step guide

Files needed (can be found in BOH FB page) :

1. DTR\_CsvCreator.xlsm
2. boh\_DTR Lines\_5\_60.afl (for amibroker v5.6 and above) or boh\_DTR Lines\_6\_00.afl (not compatible with lower amibroker versions)
3. DTR.csv (this will be created by DTR\_CsvCreator.xlsm macro)

1. OPEN DTR\_CsvCreator.xlsm (be sure to activate macros, file is sir ruel saunar's, it's safe so don't worry)

Close DTR.csv if open

1.1 - DTR Source

1.2 - select latest downloaded black box

1.3 - click Open

1.4 - Output Directory

1.5 - select output directory

1.6 - click OK

1.7 - Generate CSV

1.8 - click Yes

1.9 - DTR.csv will be created inside the specified output directory.

2. Copy afl to ami custom folder, in this case im using the afl for 6.00 version  
note that 5.6 afl will also work in ami 6.00

3. Modify path in afl (either thru amibroker or thru text file)  
this example is thru amibroker

3.1 - Right click the afl

3.2 - Click edit

3.3 - Modify this part

DTR.csv location --> D:\BOH\DTR.csv  
afl path --> D://BOH//DTR.csv

another ex.  
DTR.csv location --> C:\Users\BOH Juan Dela Cruz\BOH\downloads\DTR.csv  
afl path --> C://Users//BOH Juan Dela Cruz//BOH//downloads//DTR.csv

Key here is to change all "\" to "/"  
Don't forget the quotations ("), then save changes.

### Notes:

- Always update DTR.csv using DTR\_CsvCreator.xlsm. Use latest enhanced black box from slack.
- If you're encountering "ERROR: file cannot be opened", most probably it's a path problem. Check the DTR.csv path or the afl.
- For other errors please ask in #ruelamitrading or #askbohemians
- For other modifications and amibroker afl coding, I suggest you attend sir ruel saunar's webinar.
- Always refer to BOH process.
